## Lesson Objectives

- **Bootstrap Grid System**
- **Bootstrap Basic components**

**Instructor Notes:**

Add instructor notes here.

### 2.1: Bootstrap grid system

## Grid System in Bootstrap

- Grid systems are used for creating page layouts through a series of rows and columns to wrap the site content.
- Primarily grids are about providing structure. For web designers a grid defines the horizontal and vertical guidelines for arranging content and enforcing margins.
- Grids also define an intuitive structure for viewers because it's easy to follow a left to right or a right to left flow of content moving down the page.
- The grid won't be visible with border like table, but it exists behind the scenes to provide order alignment and consistency.
- Bootstrap includes a grid system amongst its features.

**Instructor Notes:**

Add instructor notes here.

### 2.1: Bootstrap grid system

## Bootstrap grid system

- Bootstrap includes a responsive, mobile first fluid grid system that appropriately scales up to 12 columns as the device or viewport size increases.
- Every row in Bootstrap consists of 12 columns.
- Rows must be placed within a `.container` class for proper alignment and padding.
- Use rows to create horizontal groups of columns.
- Content should be placed within columns, and only columns may be immediate children of rows.
- Predefined grid classes like `.row` and `.col-4` are available for quickly making grid layouts.

February 13, 2019 | Proprietary and Confidential | - 4 -

**Grid System in Bootstrap 4:**

Bootstrap's grid system is built with **flexbox** and allows up to 12 columns across the page. (In general this means a move away from floats and more across bootstrap's components.)

It uses a series of containers, rows, and columns to layout and align content.

**Instructor Notes:**

Add instructor notes here.

2.1: Bootstrap grid system

## Bootstrap grid system – Contd...

➤Grid columns are created by specifying the number of twelve available columns you wish to span. For example, three equal columns would use three `.col`

➤Columns create gutters (gaps between column content) via padding. That padding is offset in rows for the first and last column via negative margin on `.rows`

### ➤Grid has 5 sizes

- **xl** : indicates that the extra large grid displaying. The grid stacks horizontally  $\geq 1200\text{px}$ .
- **lg** : indicates that the extra large grid displaying. The grid stacks horizontally  $\geq 992\text{px}$
- **md** : indicates that the medium grid displaying. The grid stacks horizontally  $\geq 768\text{px}$
- **sm** : indicates that the small grid displaying. The grid stacks horizontally  $\geq 576\text{px}$
- No infix to specify extra small grid displaying (`-xs` is removed from classes). This is now by default and stacks horizontally addressing smaller devices at 576px and below .

### 2.1: Bootstrap grid system Basic Grid Structure

```
<div class = "container">
  <div class = "row">
    <div class = "col-*-*"></div>
    <div class = "col-*-*"></div>
  </div>

  <div class = "row">
    <div class = "col-*-*"></div>
    <div class = "col-*-*"></div>
    <div class = "col-*-*"></div>
  </div>

  <div class = "row">...</div>
</div>
```

February 13, 2019 Proprietary and Confidential - 7 -

**Basic Grid Structure Bootstrap 4:**

The first star (\*) represents the responsiveness: sm, md, lg or xl, while the second star represents a number, which should add up to 12 for each row.

## 2.2: Bootstrap Basic Components

## Helper Classes &amp; Responsive Utilities

- Close Icon : It is used to dismiss models and alerts
  - `<button type="button" class="close" aria-hidden="true">&times;</button>`
  - Dropdown toggles no longer require an explicit `<span class="caret"></span>`; this is now provided automatically via CSS's `::after` on `.dropdown-toggle`.
- Quick floats : To float an element left or right with a class
- Added `.float-{sm,md,lg,xl}-{left,right,none}` classes for responsive floats and removed `.pull-left` and `.pull-right` since they're redundant to `.float-left` and `.float-right`.
- Showing and hiding content
  - Made display utilities responsive (e.g., `.d-none` and `.d-{sm,md,lg,xl}-none`).
  - Dropped the bulk of `.hidden-*` utilities for new display utilities. For example, instead of `.hidden-sm-up`, use `.d-sm-none`.

February 13, 2019 | Proprietary and Confidential | - 14 -

**Utilities:** Bootstrap 4 is a major rewrite of the entire project. Most of the existing classes are rewritten to match up with the new flexbox support.

**Instructor Notes:**

Add instructor notes here.

## 2.2: Bootstrap Basics

## Helper Classes &amp; Responsive Utilities

➤Work with Images : We can apply simple styles to images like rounded corners, circle images & padding with gray border which fits all sizes

- ``
- ``
- ``
- ``

➤Center content blocks : To set an element to center

- `<div class="mx-auto" style="width:150px;">Centered-Content</div>`

➤Responsive utilities : It is used for showing and hiding content by device via media query combined with extra large, large, medium, small & extra small devices

- Use class `.d-block` and `.d-{sm,md,lg,xl}-block` to set visibility as per breakpoints.

## 2.2: Bootstrap Basics

### Working with Buttons

➤ We can use `<a>`, `<button>` or `<input type="button"/>` with 'btn' class to create a bootstrap button.

- `<a class="btn" href="#">Link Button</a>`

- `<button class="btn">Button</button>`

`<!-- recommended for browser consistency -->`

- `<input type="button" class="btn" value="button"/>`

Link Button

Button

button

**Instructor Notes:**

Add instructor notes here.

## 2.2: Bootstrap Basics

### Working with Buttons

➤ Bootstrap provides following options to apply styles to the button

- `<button class="btn btn-default">Default</button>`
- `<button class="btn btn-primary">Primary</button>`
- `<button class="btn btn-success">Success</button>`
- `<button class="btn btn-info">Info</button>`
- `<button class="btn btn-warning">Warning</button>`
- `<button class="btn btn-danger">Danger</button>`
- `<button class="btn btn-link">Link</button>`

**Instructor Notes:**

Add instructor notes here.

## 2.2: Bootstrap Basics Working with Buttons

➤ Button has following sizes and states

- `<button class="btn btn-primary btn-lg">Large Button</button>`
- `<button class="btn btn-primary btn-md">Medium Button</button>`
- `<button class="btn btn-primary btn-sm">Small Button</button>`
- `<button class="btn btn-primary btn-xs">Extra Small Button</button>`
- `<button class="btn btn-primary btn-block">Block</button>`
- `<button class="btn btn-primary btn-md active">Active</button>`
- `<button class="btn btn-primary btn-md disabled">InActive</button>`

### 2.2: Bootstrap Basics Icon Font

- Until version 3 Bootstrap was having support for Glyphicons (a library of monochromatic icons and symbols).
- Bootstrap 4 has dropped the support for Glyphicons icon font. If you need icons, some options are:
  - the upstream version of Glyphicons
  - Octicons
  - Font Awesome
- Font Awesome is most popular icon set and toolkit. You can easily download, configure the relative path with project and start using them.

```
<div>  
<span class="fas fa-search"></span>  
  <button class="btn btn-primary">  
    <span class="fas fa-sync"/> Refresh  
  </button>  
</div>
```

February 13, 2019 | Proprietary and Confidential | - 21 -

**Using Web Fonts with CSS**  
Download font awesome package. Unzip the downloaded file and expand to see the structure.  
The /css/all.css file contains the core styling plus all of the icon styles that you'll need when using Font Awesome. The /webfonts folder contains all of the typeface files that the above CSS references and depends on.  
Copy the entire /webfonts folder and the /css/all.css into your project's static assets directory (or where ever you prefer to keep front end assets or vendor stuff).  
Add a reference to the copied /css/all.css file into the <head> of each template or page that you want to use Font Awesome on. (Please refer the demo)

### 2.2: Bootstrap Basics List

➤ Bootstrap provides following options to apply styles to the List

- Use the class **.list-unstyled** to remove numbering / bullet in the `<ol>` or `<ul>` element
  - Use the class **.list-inline** to `<ul>` create single list then use class **.list-inline-item** `<li>` to place the items.
  - To create a list group use the class **.list-group** to `<ul>` and **.list-group-item** `<li>` element
  - To add a badge component to any list group item add the **`<span class="badge">`** with in the `<li>` element with as per required positioning.(place it on either left or right side of the element)
- Use the `.badge-pill` modifier class to make badges more rounded (with a larger border-radius and additional horizontal padding).

February 13, 2019 Proprietary and Confidential - 23 -

`<span class="badge badge-pill badge-light">Light</span>` - `.badge-light` modifier class helps to understand context of use. Otherwise badges may seem like

random additional words or numbers at the end of a sentence, link, or button

**Instructor Notes:**

2.2: Bootstrap Basics

List

- We can add custom content to the list group using the following code snippet

```
<div class='list-group'><a href='#' class='list-group-item active'>  
<h4 class='list-group-item-heading'>IGATE Corporate University</h4>  
<p class='list-group-item-text'>IGATE Training Division</p></a></div>
```

IGATE Corporate University

IGATE Training Division

## 2.2: Bootstrap Basics

### Tables

➤ Bootstrap provides a clean layout for building tables. Following classes can be used to apply styles over the table.

- **table** : To create a basic Bootstrap style table which takes 100% of the width of its container, and it also adds in some horizontal dividers.
- **table-striped** : Provides a striping effect for the alternate rows in a table.
- **table-bordered** : Provide a border to the table
- **table-hover** : To add a slight hover effect as the mouse moves over a table row.
- **table-sm** : It removes most of the cell padding and make the table a little more streamlined.
- **table-responsive** : It makes the table scroll horizontally to view the contents in small devices

➤ Contextual classes : table-active, table-success, table-warning and table-danger is used to apply background color for the table rows or individual cells.

**Instructor Notes:**

## Instructor Notes:

Add instructor notes here.

### 2.2: Bootstrap Basics Forms

#### ➤ Bootstrap 4 provides 2 types of form layouts

- Stacked (full-width) form
- Inline Form

#### ➤ Vertical Form

- Add a role form to the parent `<form>` element
- Add the class **`.form-control`** to form elements and wrap labels and controls in a `<div>` with class **`.form-group`**

#### ➤ Inline Form

- Add the class **`.form-inline`** to the `<form>` elements
- Add the class **`.form-control`** to form elements and wrap labels and form elements in a `<div>` with class **`.form-group`**
- Add the class **`.sr-only`** to hide the labels of the inline forms

February 13, 2019 | Proprietary and Confidential | - 28 -

`.form-horizontal` class has been dropped in Bootstrap 4. You can use Bootstrap's grid classes to create horizontal forms. Just specify how many columns each element should span. Specifically, add a `.row` class to the `.form-group` and a `.col-*-*` or `.col-*` class for each column. You should also add Bootstrap's `.col-form-label` class to the `<label>` element in order to vertically center the label in relation to textual input elements.

**Instructor Notes:**

Add instructor notes here.

**2.2: Bootstrap Basics**  
**Forms****➤Horizontal form**

- `.form-horizontal` class has been dropped in Bootstrap 4.
- You can use Bootstrap's grid classes to create horizontal forms. Just specify how many columns each element should span. Specifically, add a `.row` class to the `.form-group` and a `.col-*-*` or `.col-*` class for each column.
- You should also add Bootstrap's `.col-form-label` class to the `<label>` element in order to vertically center the label in relation to textual input elements.

**➤Validation States :** Bootstrap includes validation styles for error, and success message. To use add the classes `.is-valid` and `.is-invalid` respectively.

**➤Help Text :** Use `.form-text` (previously known as `.help-block` in v3) class to have block level help text for the form input controls.

February 13, 2019 | Proprietary and Confidential | - 29 -

**Associating help text with form controls**

Help text should be explicitly associated with the form control it relates to using the `aria-describedby` attribute. This will ensure that assistive technologies – such as screen readers – will announce this help text when the user focuses or enters the control.

For example:

```
<label for="inputPassword">Password</label> <input type="password"
id="inputPassword" class="form-control" aria-
describedby="passwordHelpBlock"> <p id="passwordHelpBlock" class="form-
text text-muted"> Your password must be 8-20 characters long, contain letters
and numbers, and must not contain spaces, special characters, or emoji. </p>
```

### 2.2: Bootstrap Basics Typography

➤Using typography feature of Bootstrap we can create headings, paragraphs, lists and other inline elements.

- All html headings(h1 to h6) are styled in bootstrap.
- By adding **.lead** class to the paragraph, we can have a larger font size, lighter weight, and a taller line height.
- **<em>** tag emphasizes a text in italics and **<strong>** tag makes the text bold
- **<small>** tag sets text at 85% the size of the parent
- **<abbr>** styles the element with a light border along the bottom and reveals the full text on hover
- **<address>** styles the contact information on web page. We need to use line breaks to break the lines because <address> default to display:block
- **text-left, text-center, text-right, text-muted, text-primary, text-success, text-info, text-warning** and **text-danger** class used to apply the styles to the text

**Instructor Notes:**
